

PRODUCT: HEMPCORK (ALL REFERENCES)

Hempcork wall tiles combine cork and hemp fibers to create a refined surface where material expression and natural texture take center stage. The painted finish subtly reveals the organic hemp strands, resulting in a balanced and contemporary architectural surface with tactile warmth.

SIZE

600 x 450 x 4 mm

MATERIAL

Composite panel made from cork and hemp fibers agglomerated with advanced resins. The surface is pigmented in color and finished with a water-repellent protective treatment.

DESIGN INTENT

Designed to highlight the natural character of cork and hemp, Hempcork tiles offer a calm and textured surface that enhances interior spaces through material authenticity and visual depth.

APPLICATION

Interior wall cladding.

INSTALLATION

Adhesive installation on properly prepared interior wall surfaces.

SUSTAINABILITY & MATERIAL PHILOSOPHY

Hempcork tiles integrate cork and hemp fibers, both derived from renewable plant-based resources. The combination of these materials enables the creation of lightweight wall tiles with tactile comfort and long-term durability. The product is designed for interior architectural applications where material efficiency, surface longevity and reduced replacement cycles are valued.

ENVIRONMENTAL STATEMENT (Non-certified)

At this stage, Hempcork products are not covered by third-party environmental certifications. Material development follows a responsible approach focused on durability, efficient use of raw materials and the integration of renewable fibers into interior applications. Environmental performance data and certifications are part of an ongoing development process.

CERTIFICATION

No certifications have been developed yet.
